Curator.

PRICE ONE PENNY. Sold at the Museum.

JUNE, 1910.

LINCOLN:
Coins of the Roman Period

FOUND IN LINCOLNSHIRE.

It is very desirable that a list of coins of the Roman period found in this county should be compiled. Only here and there can be found written evidence of the occurrence of such coins, whilst scattered about this large county there are numerous persons who possess Roman coins in large or small numbers. It is hoped that all who have specimens will report them to the writer so that they may be incorporated in the list which will be published. It will be better still if the coins can be brought together on account of the educational, as well as the historical value such a collection would have.

The County Museum is doubtless the institution in which such a collection should be permanently cared for. The large number of visitors to the museum and their applications for information regarding our county's antiquities make it obvious that such a series is needed. It is hoped that anyone who has in his power to contribute a single coin or a few coins of the period will do so, that the county collection may be the means of reference for the work under consideration.

It is intended that the first list shall be of Roman coins actually in the Museum collection, which forms a very respectable nucleus for such a list. The public spiritedness of several donors has put some two or three hundred coins at the disposal of the writer, and it is hoped that this appeal will induce others to emulate their generosity and so contribute to the delight of the many, without being out of reach of their own gifts. To such donors as Mrs. H. Mackinder, Miss O'Neill, Dr. E.
Mansel Symposn, Mr. Nathan Heywood and others the writer here expresses his gratitude.

The list will cover the period from the early years of the first century to the time of the Constantines, the middle of the fourth. Where possible the inscriptions will be given in full, and where such are omitted it must be assumed that the coin is worn and therefore illegible. The place of discovery will be given and the name of the donor to the Museum collection of Roman coins.

The denominations of the coins will be given as far as possible. The popular classification of Imperial bronze coins in "first," "second," and "third" brass has of course no scientific value. The so-called first brass is the Sestertius; the second brass the Dupondius, while the Semis, Trinummus and Quadrans are indiscriminately classified as third brass. By the time of Caracalla the Denarius had become so debased as to be almost a bronze coin. As the term "third brass" is sometimes erroneously applied to it, it may be as well to point out that it has no connection with the bronze coinage. In 215 A.D., on account of the debasement of the Denarius Caracalla introduced a new silver coin called the Argentum (worth a denarius and a half) which can be distinguished from the denarius by the fact that the head of the Emperor is radiate on it. Each Emperor debased the coinage more and more so that the argentum soon became a copper coin washed with silver, and drove the denarius and also the copper coinage out of circulation. This coin which was the standard coin during the third century is really a silver and not a brass coin. Diocletian recalled in 292 A.D. this debased coinage and instituted a new silver coin, and two copper coins the Felix and the Denarius.

When the series in the Museum collection has been exhausted it is intended to publish a further series of Roman coins which have been found in Lincolnshire, the notices of which have not been before brought together, and such information as may come to hand as this paper progresses. The writer hopes that all who have it in their power will forward that, which will materially add to the knowledge regarding the occurrence and distribution of coins of the Roman period found in Lincolnshire.

In conclusion I have to thank Mr. J. Allan of the British Museum for assistance during the preparation of this catalog.
ROMAN COINS.

Dupondius.

Worn specimen. Found in a garden, Nettleham Road, Lincoln. Presented by W. Priestley, August 1909.

NERO, 50 to 68 A.D.

Dupondius.
